10 million and 10 million	0202
and the second s	• Standard soft contact lenses use water
0200	to transport oxygen to the cornea but
and the second sec	O2O2 contains silicone.
Se S	
THE TE TE	Silicone is highly gas-permeable so it
	allows the free flow of ample amounts of
and the second s	oxygen directly through the lens.
INTEROJO Inc.	• This direct flow through the lens ensures
– Korea	that the cornea gets a continuous supply
(Contact Lens & Accessories, Booth No: 1C-E12)	of oxygen which promotes a healthier
	eye.
